Lesson.

In giving lesson aim to be considered
as part aim. w. contribute to general.

all lessons put in curriculum w.
purpose. (counting sch.).

on part: aim depends:-

- ① choice of material
- ② planning
- ③ procedure.

aim must b. carried out.
steps m. b. taken to see chln.
have grasped main points
Recapitulation.

In some lessons Gen. Aim. more
imp than part. (H. Study.

Lesson.

I In giving a lesson or series of lessons -
aims have to be considered. each part.^r
 lesson will contribute to general aim.

All lessons put into curriculum with
 a given purpose. [In this country there is no
 rigid rule as to what subjects may
 be taken - head or H.M.I may
 advise for or against. e.g. French &
 shorthand introduced into College
 School - in elem^y school latter not
 allowed - not considered duty of elem^y
 school to give Vocational Trng. But Sen^r
 school has practical has & semi-
 vocational bias].

Choice of material - planning - procedure
 must all refer to the partic.^r aim & this must
 be carried out - steps must be taken
 to see if chln. have grasped rules etc.,
 [Recapitulation].

In some lessons general aim more imp.
 than part.^r aim. [e.g. Nature Study - gen.^l

6.

Teachers m. try to achieve aim.
+ not get a wrong aim (Dictation).

Common fault w. beginners. Work
vague + aimless. sh. get into
habit in time given.

Test sh. b. made where test poss.

aim to appreciate beauty of nature -
any flower study - is partic^r aim -
beauty in relation to nature - poetry
with it. In sent^l Sch. may be made
more botanical than perhaps
partic^r aim more imp.].

Aim must be conceived rightly & try to
conceive achieve it. [Dictⁿ - source of error -
not to test spelling - this could
occur once a month - everyday dictⁿ
should teach spelling - idea should
be to have no mistakes at all - as
once a child misspells it he is
likely to spell it wrong for ever after.]

A common fault with beginners is that
work is vague & aimless. If you set out to
teach a def^l aim one should get thro'
it in time given. A test should be made
where test is possible. [In Scripture there
might be a moral aim - this
comes from own feelings & general
attitude of chln.]

20. Avoid 'i' wh

- ① Suggest answer.
- ② Require Yes or No.
- ③ PS in negative.
- ④ Should n. change form of? too quickly. do n. b. afraid of pause 20 sec.
- ⑤ Those wh. are vague & wh. foster guessing - date etc.

* Encourages calling out.

Treatment of answers.

attention sh. b. paid to

- ①. accuracy & completeness of thought.
m. analyse A. quickly - demand clear thinking in class.
- ②. clear expression of thought
- ③. sh. b. grammatically correct
- ④. A in sentence - do n. overdo it.
good? sh. demand sentence answer.
- ⑤. written A's done occasionally
encourages everyone working.

IV examples of bad Questions which must be avoided :-

- (i) Questions which suggest the answer.
"Is it — I mean?"
- (ii) Questions requiring "yes" or "no".
- (iii) Q's in negative - "Do we not get cotton from America?"
- (iv) Should not change form of ? too quickly - try & frame a good ? & give class time to answer - do not be afraid of a pause (up to 20 sec)
- (v) Those which are vague & lead to foster guessing - dates etc.
"What happened when J. Caesar landed in ~~Eng~~ Britain?"

N.B Occasionally let boys ask questions - after a silent reading - divide class into 2 - one boy asks other group. (Seniors).

B. Treatment of Answers.

In receiving an A. attention should be paid to I accuracy & completeness of thought - Teacher who can deal with answers efficiently

22 Observation
having their accents. do more than
they do. the study of accents, many of
which know for this fact that
use this form of procedure.
the other want eye exercises, etc.

* Dialects distinguish // careless grammar &
tone dialect. Latter vowel sounds
& peculiar phrasing.

Some opinion that great shame
to do away with dialects - no
progress if not.

More people speaking common
tongue - better will they understand
one another.

Standard tongue - ideal
travel - for the fostering friendliness.
natural tendency to common
language - some words already.

Encourage of dialect a retrograde
step.

* If class gets out of hand - usually
because they are not doing something
written answers useful here!

28

Main aim of school is to train individuality of child.
This does not mean that it denies his social training -
an individual could not live by himself. In training
individual to highest powers possible a great contribution
is given to the social side or community. The relationship
of individuality and sociability v. with now - different
opinions exist. Russians always based on military power
- subservient to the state - we have never been militarised
or forced to this extent - v. fortunate - education decides how
citizens are to be brought up - what meant by worthy citizens
depends on state - in Italy & Germany "state worship" - in this
country, in America we try to stress individual rights of
state to individual - we try rather to emphasise the rights rather
than the duties. part of teacher to try to maintain the
broad principles of democracy.

How far school trains individuality.

one of effects of compulsory educⁿ - to produce
all same pattern - (industry - mass productⁿ).
- Train child to think for themselves.

Natural limitations:

- ① imitation - child learn by it - fashions
change by it - individ^y of one
person easily followed.
- ② gang instinct - mass individ^y - leader.
- ③ large classes - class unit is indiv^y.
Class have to accept wh. he says - no
chance of self-expression.
- ④ lack of apparatus for individ^y work in
former years.
- ⑤ All tend to follow same curriculum.
Child to deep not suited to them.

show that today there are just as many people worshipping worldly things more than spiritual things. principles remain altho' circumstances differ.

How far the school can train individuality.

Today there seems to be less "character" about is an opinion of Bright. His impression that formally more char. different types were to be seen. This seems to be one of effects of compulsory education - all controlled education tends to produce all same pattern - same as industry - we must train chld. to think for themselves not always to accept without argument the opinions of others.

Natural limitations. - strong natural feeling of imitation especially for young children - chld. learn to speak by imitation - fashions change by imitation - of thought by suggestion - any individuality in a person is quickly followed -

{ it is up to teachers to train chld.
to think for themselves not accept
blindly a suggestion by anyone else.
such as dictator. - this must be checked.

② The gang instinct - mass individuality - tendency to group together under a leader.

③ Large classes. - teacher tends to teach class as the unit rather than the individual - larger class the more likely teacher is to rely on oral methods - more largely class have to accept what he says - class do not get chance of self-expression tends to make class look upon himself as infallible tends to make class prone to suggestion.

We want our citizens to think for themselves!
In upper school teachers should try to train chld. against suggestion - show them how suggestible they are.

④ Lack of apparatus in the past - chld. could not work by themselves - not necessary that every lesson should be one of individual work - include books in apparatus. In present day sch. schools chld. should be made to find out things for themselves. Get chld. into way of different newspapers.

⑤ all tend to follow same curriculum - chld. too young

Improvement. by.

- ① Sub. division of classes A.B. & C streams.
- ② chld. encouraged to do more work from books.
- ③ monitorial jobs - training in responsibility.

Handbook. P. 30 § 38.

Indiv. work common feature of sch. work in increasing number of schools.

- ① Infant - chld. do all learn alone as members of groups.
- ② Jnr - practice in acquiring skill. need varying amounts of time.
- ③ Sen - cultivation of indiv. talents & interests of vital imp.

Also. P. 83 § 25.

→ P. 146. § 34.

Curriculum & Aim of School.

Sch. m. imp. factor in educ. of child - m. so formerly - home & church - former still imp. influence on child - but sch. taking more & more responsibility - age 15 - meals etc.

Aim of School.

- ① to train citizen for society to which he belongs. to make him most efficient.
- all states have same aim - ideas of citizen differ.
- no political training in sch. - regard indiv. as necessary to society - train for co-oper.

M.D. - chld. more than 2 classes behind others of their age. if only 2 are just backward - have to have individual attention

Handbk P. 15 § 12.

- ① to provide environment wh. is best suited to indiv. & social devel.
- ② to stimulate & guide healthy growth within environ.
- ③ to enable chld. to acquire habits, skills, knowledge, interests & attitudes of mind wh. they w. need for living a full & useful life.
- ④ to set stds of behavior, effort & attainment, by wh. they can measure their own conduct.

Also p. 23, 41 & 42.

Handbk. P. 8. § 4.

First, these must proceed a way how to discern the natural inclinations & capacities of chld. Secondly, next m. ensure the culture & nourishment of the mind. Thirdly, the moulding of behaviour & decent forms. Fourthly, the tempering of the affections. Fifthly, the quickening & exciting of observations & practical judgement. Sixthly - last in order - ~~the~~ principle in value, being that we must first consolidate all the rest, is the timely instilling of conventional principles & the seeds of religion. [Sir Henry Dutton (1568-1639)].

Handbook.

Infant Sch.	85	66	67.
Junior ..	102	"	"
Senior ..	129	66	67.

to specialise v. much - but the fact remains we in certain subjects chldn should drop if they show no aptitude - drawing e.g. - much time given in this subject seems to be wasted in elementary school - those who are v. good may spend more time on it. Try some more latitude in this choice of subject in their last years at school.

- ⑥. Question of promotion - no doubt difficult - each child moves to next class on age - would get muddled - have one school to another at 11+ - if kept back at III instead of IV - leads to some difficulty -

How matters are improving as regards individuality

- ①. Sub-division of classes - A, B & C streams - several classes of same age - each can have teaching adapted to their needs. even in all standard schools - we have division of classes particularly in Arith.
- ②. Chldn encouraged to do more work from books instead of relying on teachers' word. P.N.E.U. - method used in Gloucestershire.
- ③. Give them plenty of jobs (monitorial) to train them in responsibility - tending flowers, aquarium, library, distribution of various kinds of books. B.B.s. chldn. must be trained to do their jobs well - each should have an opportunity to contribute to the general well being of his little society - early training in citizenship In some schools work on team system -

Curriculum & the Aim of the School.

Educational Aim & Aim of School - home is very imp. contributor to educt. of child - church & home educated chldn. before schools did. In recent years school has become the most important factor - homes less important but still has a considerable effect on the chldn - now schools take on meals - home now has less claim on responsibility.

Aim of school - to train a citizen for the society to which he belongs to make him the most efficient most imp. in the present day.

All states haven't same aim - ideals of a perfect citizen diff. ∴ our aim different to Germany & Japan.

most think they should be trained physically - mentally - they also desire to give the highest possible character training.

NB Both Nazi & Soviet's do not believe in much independence of thought - people trained to be suggestible - we claim to wish to encourage free expression of thought - we have some idea of independence as an ideal of character.

Political training must not be given in schools - but teacher is not doing so if he does as above - regard individual as necessary to society - train him for co-operation - he should have some voice in the government of the country.

A Short History of Elementary School

None till beginning of 19th. - till then had been Grammar schools some idea of Sunday schs for poorer chldn.

At breakdown of Roman Empire all forms of educⁿ except the monasteries were broken down - this of course mainly of the aristocrats - training in monasteries for priesthood - most of the state administration done by clergy because they were the only people who could read & write.

Then beginnings of lay schools - run by clergy - Universities begun - scholars would settle down in a place & collect students around them - poorer ones who could not afford to live separately lived together in common building - so colleges within universities formed.

At beginning of Tudor period beginning of administⁿ by lay people - Tudors who broke power of barons realised importance of educating middle classes & so grammar schools - founded by wealthy people - gave a free educⁿ to middle classes - height in time of Elizabeth - Shakespeare product of educⁿ of this age - Sydney.

Then went backward - Stuart's neglected it to a certain extent - less value of money - endowments less - standard dropped - at time of Hanoverians - low - administration by aristocrats - at beginning of 19th education at a very low stage - in midst of Industrial Revolution - Napoleonic wars just over.

Church societies realised the immoral state of the country as result of Industrial Revolution - child labour - shams beginning - & general low moral standard. National Society & B^r Foreign Bible Society decided to start schools & began to build schools by voluntary system - chldn. went if they wished & paid a few pence

Beginnings of Education

National Church Schools.

per. week. Aim to start with largely moral
went on up to 1833 with only voluntary aid - teachers were
not trained & staffing very inefficient.

In 1833 Govt gave these two societies of 20,000 - 1st
national contribution to education. Continued till 1839 &
the formed a committee of the Privy Council to deal with
education & then contribution continued - aided by these grants
schools went up very rapidly - either "National or
British" schools - one in almost every area - Govt
demanded some right of inspection ~~beg~~ began 1840 -
training of teachers in 1840 - went on till 1849 - formed
a Royal Commission to enquire into elementary schools -
how many were not ~~separ~~ obtaining education -

Newcastle Commission

Lowe's Code.

As the result of this enquiry we get payments by
result - Lowe's code - chln. had to pass an examination
in 3's - teachers paid more attention to brighter pupils
only - this one of the reasons - a very low standard set for
each age group - if chln. passed received so much for each
pupil - head's salary depended on this.

Results - schools lost moral aim - made for low
mechanical standard of work - v. few other subjects
taught. Inspectors job v. much lowered - lost his
position as helper & advisor.

Matthew Arnold.

Matthew Arnold - poet - inspector - protested in his
reports on dangers of this system - eventually more
subjects ~~pass~~ added - poetry - this had to be class
examined - mechanical process. geog. hist.

Payment by results ended about 1895. Still under
examination - massing of knowledge in schools - mechanically
learning a list of facts - e.g. in Geog. all capes & bays &
rivers of England learned by heart - counties & capital
towns etc - perhaps nowadays schools gone other way -
not enough essential facts learnt - after payment of
results Govt gives L.E.A. grants on average attendance
provided school has good report - this weapon of
Boff.

Govt. Grants

Forster's Educ. Act.

1870 - school boards set up & Board Schools built.
could raise money from public money rates - first
time schools were to become national - had to
